

BoundWorx[®] Resin Bound Collection

Resin
Bonded
●●● Ltd.

Why install BoundWorx®?

Strong & Durable

When laid to the correct specifications, the structural strength of the BoundWorx® Resin Bound system means that it should last well in excess of 10 years.

UV Stable

UV Stability is vital. In order to retain the colour of the chosen Resin Bound BoundWorx® finish, the system has been formulated to ensure that it is fully UV Stable. Non or partial UV Stable alternatives will discolour within weeks of being installed, creating a yellowing and patchy effect where there are shaded areas.

Low Maintenance

Resin Bound BoundWorx® is extremely low maintenance. Rain water will keep it generally clean and a light pressure wash will remove any build up of algae or dirt contamination.

Permeable & Eco Friendly

Resin Bound BoundWorx® is a permeable, SuDS compliant system when laid over a permeable substrate. This often eliminates the need to obtain planning permission and that it is an environmentally friendly alternative to conventional surfacing solutions.

Attractive & Appealing

Available in a wide range of stunning elite marble finishes, the BoundWorx® Resin Bound system is highly attractive with good anti-slip qualities. The smart, stylish and modern look can dramatically improve the look of any property.

BoundWorx® Training

As the demand for Resin Bound driveways increases over the UK now is an excellent time to enrol in our very own BoundWorx® Training Course. At Resin Bonded Ltd we hold regular classroom training courses to suit any contractor's busy schedule. Our aim is to confidently extend your skill set in the system, with a combined knowledge of over 20 years in the Resin Industry our trainers are amongst some of the leading experts in the field.

"I attended a training course at Resin bonded, it was really great. Everybody was so kind and helpful. Preparation was great, everything was so professional, very satisfied, highly recommended."

Our training programme gives contractors the opportunity to attend an Office-based Introductory session which is then followed by a practical On-site session.

BoundWorx® Restore

BoundWorx® Restore is a clear UV stable system that can be used on new and existing Resin Bound Surfaces to revive the surface adding the clear gloss sheen that freshens and restores the surface to its former state.

BoundWorx® Restore together with fine glass grit can be used to aid grip to Resin Bound surfaces where there is insufficient traction.

BoundWorx® Restore can also be used to reduce the effects of light blooming caused by moisture during or close after application.

BoundWorx® Aggregate

Washed and kiln dried natural aggregate.

Combine with BoundWorx® Resin Bound for the perfect resin finish
